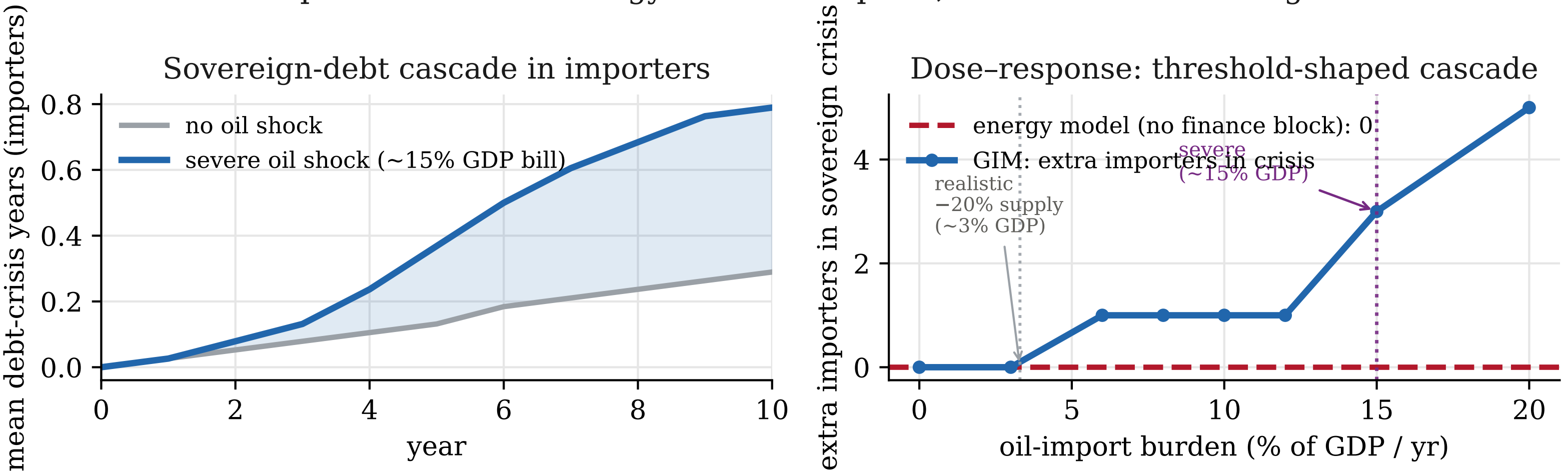
Scenario B — Oil price shock: an energy model sees price; GIM sees the sovereign-debt cascade



Anchor: IMF GFSR Oct-2025 ch.3; BU GDP Center 2026. Energy-system models (MESSAGEix) stop at price / demand adjustment — no sovereign-finance block. Real case: Sri Lanka 2022 ($1.9B reserves vs $6B debt service→ default). The cascade is threshold-shaped; the energy model is flat-zero everywhere.
