

Scenario C — severe crop yield shock: AgMIP stops at hunger; GIM carries it to protest pressure

Anchor: AgMIP / IPCC AR6 (yield decline to a hunger index). Lagi, Bertrand & Bar-Yam 2011 (arXiv:1108.2455): food riots above FAO index 210 ($p < 1e-7$), coinciding with the Arab Spring 2011. GIM adds the food, affordability and protest chain in vulnerable importers, with convex escalation.
